

TINKER CAMP

Dates: July 14 - July 24, 2015 (No Mondays)
Times: 8:00 am - 12:00 pm

Norton campers will be presented with the unique challenge this summer, to work as a contributing team member to design and build a cardboard model of London! Campers will be encouraged to use their creativity, collaboration, and engineering design skills as they work to complete this project. Students will work with an educator or guest engineer to design working structures of London's most famous landmarks to scale. Campers could decide to create a working scale model of the London Eye, Big Ben, or even a moving double decker bus. Cardboard will be the primary building material, but will have access to LED lights, motors, and other tools that will help facilitate the creation of an interactive London city scape. The creative possibilities are endless!
