

TINKER CAMP

July 19 - July 29 (No Mondays)
8:00 a.m. - 12:00 p.m.

Norton campers will be presented with the unique challenge to work as a builder, painter, and sculpture in the design and building of Ancient Roman monuments! Campers will be encouraged to use their creativity, collaboration, and engineering design skills as they work to complete this project.

Students will work with an educator or guest engineer to design scale structures of Rome's most famous landmarks. Campers decide to create a scale model from a list of famous Roman places like the Colosseum, Trevi Fountain, or even the ceiling of the Sistine Chapel. Cardboard and clay will be the primary building material, but students will have access to LED lights and other tools that will help facilitate the creation of an interactive Roman city-scape. The creative possibilities are endless!
